Statecare Floor Alarm System

Floor Alarms can be a very helpful way of monitoring a patient's movement, without physical or chemical restraining. They are normally used with people who stand up from a chair or get out of bed and could fall over. However, sometimes the patients may be able to walk, but due to dementia, they may put themselves or others in danger.

The Statecare floor alarm system is a state-of-the-art designed system to alert caregivers when someone falls or simply gets out of a bed when they are not supposed to.

The Standard Monitor

The Standard Monitor offers simple operation, low Maintenance, with re-arm and adjustable tone and alarm Volume control.

Premium Floor Mat

The premium floor Mat is made from heavy duty non-slip material.

This system can be battery operated and connected to a Nurse Call System if required.
