WALKERS & ROLLATORS

ROLLZ MOTION RHYTHM PARKINSON ROLLATOR WITH CUSTOMIZABLE CUES

The Rollz Motion Rhythm walker is expertly designed for people with specific neurological diseases, such as Parkinson's, who experience freezing or a disrupted walking pattern.

Multiple stimuli are available to help the user take the first step, make subsequent steps, or maintain a walking rhythm.

The stability of the Rollz Motion Rhythm prevents falls that could occur due to balance problems. In addition, the cues overcome freezing or festinating gait patterns. A projected laser line could help to trigger the user to break a freeze. A metronome or the repeating vibration in the handles can further help to set the walking pace.

To start a cue, simply press the button on the handle.

Standard Features

- Specifically designed for users with Parkinson's
- Adjustable cues for people who experience freezing or a disrupted walking pattern
- Bluetooth connectivity for headphones
- Easily adjustable cues that enable you to tailor the cues to suit what works best. You can have 1 of 3, 2 of 3, or all three cues selected, and you can adjust the rhythm and pattern of each one. You can set the cues to run for 8 beats, 16 beats, 32 beats, or continuously
- The audio cue and tactile cue can also be set to run through your smartphone and bluetooth headphones for discreet prompts
- Bright, easy to see green laser line

- Large wheels and shorter than average wheelbase which makes it very easy to steer
- Inverted and ergonomic handles which reduces pressure on finger and wrists joints
- Folds easily for transport

Ability to add-on

- Slow down brakes to create more resistance in the wheel when using it as a walker
- Wheelchair package to enable you to easily convert it to a wheelchair whilst out and about
- Any of the other Rollz Motion accessories
