The Butler Off

The Butler Off (doffer) helps to maintain independence by simply using the hook on the top of your sock or stocking and pushing directly down the leg and over the heel.

Stocking Donner Stand

Designed to make donning compression stockings easier and protects against tears and runs that can occur applying hosiery by hand. Recommended for those with limited dexterity.

Healthy legs are essential for good quality of life. Whether your vascular care is for a pre-existing condition or to help prevent vascular problems, we stock an extensive range of graduated compression stockings. Graduated compression stockings improve circulation by applying measured pressure on the leg muscles. These muscles compress the veins, improving the flow of the blood back to the heart so there is less swelling, tiredness and aching in the legs.

Our Range includes:

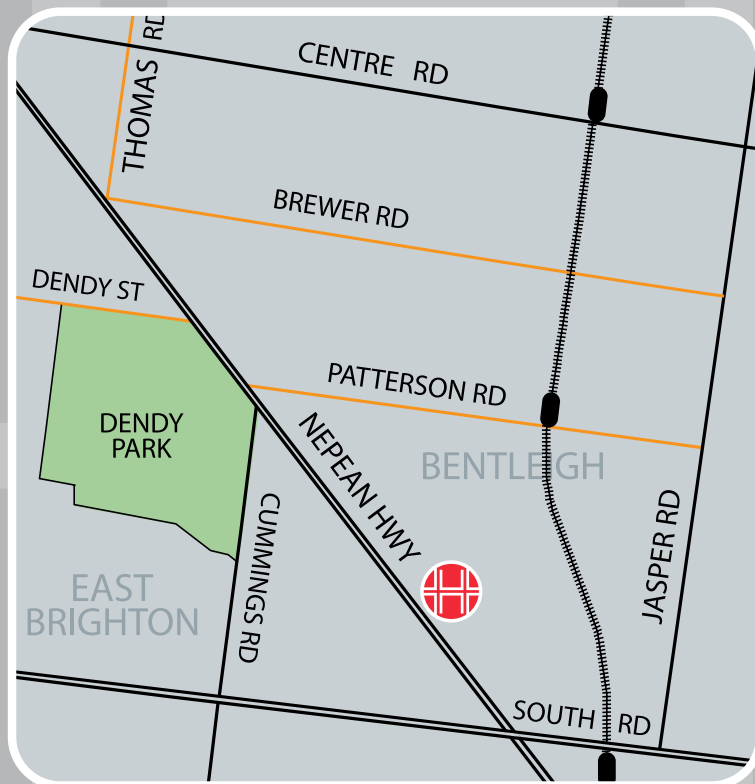

Light Compression (15-20 mmHg)

Minor foot, ankle and leg swelling, leg heaviness and fatigue due to varices, mild varicosities without oedema, helps prevent thrombosis (inc. Travel-related DVT) and helps prevent varicosities during pregnancy.

Moderate Compression (20-30 mmHg)

Moderate to severe varicosities including pregnancy, leg heaviness and fatigue due to varices, varicose veins during and after pregnancy, post sclerotherapy, helps prevent thrombosis, helps prevent recurrence of venous ulceration, oedema and superficial thrombophlebitis.
